RATIONALE

The AIBE Association was founded with the aim of implementing joint projects between Italian and Brazilian researchers in the field of malignant hematological diseases. Thanks to the activities supported and promoted by AIBE, study projects have already been carried out, mainly focusing on the prognosis and therapy of malignant lymphomas and chronic myeloid leukemia. Researcher exchanges between Italy and Brazil have also taken place. In addition, shared study projects are ongoing, including prospective pathology registries for low-grade lymphomas (NF10 study), T-cell lymphomas (T-cell Project), and Hodgkin's lymphoma.

The annual AIBE meeting, which in 2025 will be held in Reggio Emilia, provides an opportunity for further discussion of the results of ongoing research and to explore new projects and future collaborations. The meeting will involve leading experts from the respective countries of origin in the field of oncology and hematology research, who are internationally recognized. The program will be structured as a workshop and will include presentations on the latest advances related to the diagnosis and classification of hematological malignancies, with a particular focus on lymphomas, myelomas, and myeloid leukemias. Special attention will be given to epidemiological aspects and therapy. In an era of significant therapeutic innovation and the redefinition of new therapeutic paradigms for many hematological diseases, this event will provide a unique opportunity to compare the management of new drugs (small molecules, antibody-drug conjugates, bispecific antibodies, and cell therapies) between the Italian and Brazilian contexts, generating ideas for potential development or new research projects aimed at improving access to and management of treatments in both countries.
